EXPERIENCE

Decagon, Senior Software Engineer

August 2025 - Present

- Migrated core analytics queries to ClickHouse, reducing the slowest dashboard queries from ~2 minutes to under 10 seconds and enabling real-time aggregations over 800k+ conversations/day across product features.
- Built and launched outbound missions, enabling customers to run recurring automated call campaigns with configurable retries and tracking. This feature drove \$1M+ in ARR within a month of launch.
- Developed conversation flow analytics, giving customers visibility into how their end users navigate multi-turn processes. Built on materialized views aggregating data across hundreds of thousands of daily conversations.

Figma, Senior Software Engineer

August 2021 - July 2025

- Tech lead with 4 years total on the team building full-stack design systems features into the Figma editor. Helped define the team's goals and roadmap, finding the balance between technical improvements and new feature support.
- Led a yearlong work stream to support Variables within components as part of Figma's headline feature in 2023. Solved complex problems, using expertise to eliminate technical debt and enable other engineers to be productive in this area. Worked cross-functionally with design and product to explain and solve complexities in different aspects of the project, including versioning and publishing. Over 34M variables have been created and contributed to an additional \$12M ARR via upgrades.
- Advocated for and led a team of 4 to work on a quality focused project to improve user experiences and remove technical debt. Fixed over 40 high priority issues related to Variables within 3 months.
- Guided the Prototyping team on building an advanced prototyping feature, helping enable other engineers in a technically complex domain. Identified and addressed areas with large performance and data corruption concerns while providing overarching architectural guidance. Over 40% of relevant users utilized the feature within 6 months of release.
- Mentored a mid-level engineer, meeting weekly to resolve concerns with their project and develop a performance plan to help them get promoted. Hosted an intern on the DS team, helping to scope their project to allow for a successful launch and convert to a full time employee.

Jane Street, Software Engineering Intern

June 2020 - August 2020

- Completed a 10-week internship on the engineering team, work is under NDA

EDUCATION

University of California, Berkeley

August 2017 - May 2021

- Electrical Engineering and Computer Science, B.S.

ADDITIONAL INFORMATION

- **Technical Skills:** C++, TypeScript, Python, Java, React, Ruby, SQL
- **Interests:** Ultimate frisbee, Urban dance, Cinematography
